

The first ever online course to fully master point cloud processing.

- ✓ No Prerequisites
- ✓ Real 3D Projects
- ✓ Lifetime Access
- ✓ Certified by Expert

POINT CLOUD PROCESSING FULL COURSE

EDITION 2022

Hosted by
Florent Poux, PhD
Course Director

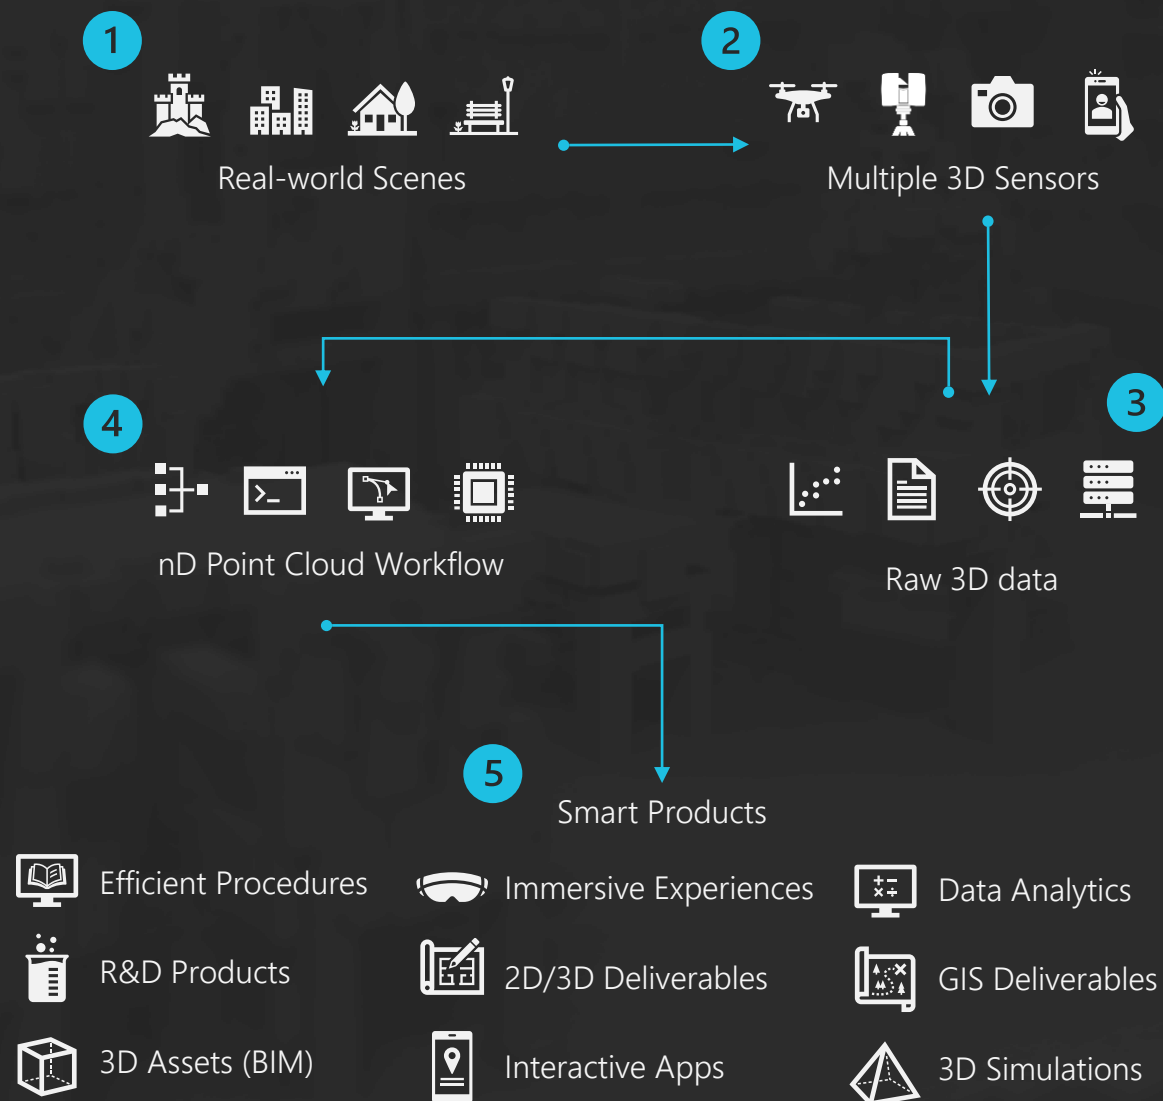

POINT CLOUD PROCESSING FULL COURSE

This complete course teaches the secrets to creating the **most effective workflows** to transform raw 3D data into smart nD products whether you are

a  **student**,
a  **professional**,
a  **researcher**,
a  **manager**,
a  **professor**.

Adam Wylie
Technical Director
Radial Systems

“The Point Cloud Processor Course is helping me immensely. I built an automated system that takes a .laz file, reads all the point data in the scene, segments, instances and classifies power poles, power lines and trees.”

EDITION 2022

POINT CLOUD PROCESSOR OVERVIEW

Module 1. Point Cloud Basics

➤ How to start processing point cloud datasets from different sensors (LiDAR, Laser Scanners, Photogrammetry).

Module 2. Point Cloud Engineering

➤ Create advanced feature extraction and registration routines tailored to your data.

Module 3. Point Cloud Semantization

➤ Develop a pure semi-automatic segmentation procedure followed by a classification strategy.

Module 4. Analysis & Vizualisation

➤ Create robust qualitative and quantitative analysis reports supported by unique 2D/3D visualizations.

Module 5. Data Structure & Modelling

➤ Apprehend 3D data structures (Octree, kd-tree) to accelerate processing and for efficient 3D Modelling.

+ 3 🎁 Python Bonuses

➤ Combine all 5 concepts together to create unique automatic workflows using Python and CC Library.

Hosted by
Florent Poux, PhD
Course Director

MODULE 1. POINT CLOUD BASICS

CHAPTERS

- 01** Point Cloud Data Formats Fundamentals
- 02** Setting-up the Software Environment
- 03** Point Cloud I/O Operations
- 04** Point Cloud Pre-Processing Fundamentals
- 05** Point Cloud Pre-Processing Basics
- 06** Point Cloud Pre-Processing Advanced

How to start processing point cloud datasets from different sensors (LiDAR, Laser Scanners, Photogrammetry, MLS)

LEARNING OUTCOMES

- ✓ Master the hands-on context of point cloud datasets
- ✓ Create ETL pipelines for ASCII / BINARY point clouds
- ✓ Unlock new 3D data representations (Mesh, Voxels)
- ✓ Implement a full data pre-processing workflow (incl. data sampling, cleaning, transformation, reduction)

MODULE 2. POINT CLOUD ENGINEERING

CHAPTERS

- 01** Point Cloud Feature Extraction Fundamentals
- 02** Feature Extraction – Hands-On
- 03** Point Cloud Registration Fundamentals
- 04** Point Cloud Registration Basics
- 05** Point Cloud Registration Advanced

Create advanced feature extraction and registration routines tailored to your data.

LEARNING OUTCOMES

- ✓ Derive valuable information from point clouds
- ✓ Explore neighborhood selection methods
- ✓ Master PCA to extract meaningful features
- ✓ Master point normals and their typology
- ✓ Select feature sets for specific applications
- ✓ Master coarse-to-fine registration methodologies

MODULE 3. POINT CLOUD SEMANTIZATION

CHAPTERS

- 01 Point Cloud Segmentation and Clustering Fundamentals**
- 02 Segmentation and Clustering Basics**
- 03 Segmentation and Clustering Advanced**
- 04 Point Cloud Classification Fundamentals**
- 05 Point Cloud Semantic Segmentation Basics**
- 06 Point Cloud Classification Advanced**

Develop a pure semi-automatic segmentation procedure followed by a classification strategy.

LEARNING OUTCOMES

- ✓ Learn and apply several segmentation workflows
- ✓ Engineer new distinctive features (E.g. DoN)
- ✓ Develop a Supervised Learning System
- ✓ Apply best-in-class Machine Learning Classifiers
- ✓ Fast Initiation to Python and Google Colab scripting

MODULE 4. ANALYSIS & VIZUALISATION

CHAPTERS

- 01 Point Cloud Analysis Fundamentals**
- 02 3D Geometry analysis Basics**
- 03 3D Geometry analysis Advanced**
- 04 Point Cloud Visualization Fundamentals**
- 05 Generation of Visuals**
- 06 Web/Desktop Deliverable creation**

Create robust qualitative and quantitative analysis reports supported by unique 2D/3D visualizations.

LEARNING OUTCOMES

- ✓ Apply 3 point cloud comparison strategies
- ✓ Put a control system in place for robust quality reports
- ✓ Learn and apply the fundamentals of statistical analysis
- ✓ Create stunning 3D renderings (video and still)
- ✓ Deliver point cloud as a product with WebGL

MODULE 5. DATA STRUCTURE & MODELLING

CHAPTERS

- 01 Point Cloud Data Structure Fundamentals
- 02 Point Cloud Data Structure Basics
- 03 Point Cloud Data Structure Advanced
- 04 Point Cloud Modelling Fundamentals
- 05 3D Point Cloud Modelling Basics
- 06 3D Point Cloud Modelling Advanced

Apprehend 3D data structures (Octree, kd-tree) to accelerate processing and for efficient 3D Modelling.

LEARNING OUTCOMES

- ✓ Master 3D Data structures (kd-tree, octree, voxels, ...)
- ✓ Parse point cloud data set in specific structures
- ✓ Learn & Apply 3 different meshing approaches
- ✓ Optimize point cloud to mesh workflows

MODULE BONUS. 3D PYTHON ADD-ONS

Combine all 5 concepts together to create unique automatic workflows using Python and CC Library.

CHAPTERS

- 01 3D Python Basics for Point Clouds
- 02 Environment and 3D Library Set-up
- 03 The CC Library for Deep Automation
- 04 Point Cloud to 3D Voxel / Mesh
- 05 Latest Code, Tutorials and R&D

LEARNING OUTCOMES

- ✓ Learn and Code with Python for 3D Data.
- ✓ Combine Python with the the CC Library.
- ✓ Generate 3D meshes from massive point cloud data
- ✓ Develop a modular program that can address the 5 key processing steps of point cloud data

Level 3. Wise Dragon
